‘Inspiring Innovation’ at Yankee Dental Congress

Nearly 27,000 dental health professionals and guests from around the United States are expected to attend the 2019 Yankee Dental Congress, which will be held from Jan. 31-Feb. 2, at the Boston Convention & Exhibition Center.

“Yankee,” which according to the meeting’s organizers is New England’s largest dental meeting, is presented by the Massachusetts Dental Society in cooperation with the dental societies of Connecticut, Maine, New Hampshire, Rhode Island and Vermont.

The theme of this year’s Yankee is “Inspiring Innovation,” which according to the organizers exemplifies how dental professionals can get inspired by industry-leading speakers and innovative continuing education opportunities for clinical development to energize their passions and fuel advances in the dental field.

Among the education highlights this year, “The Morning Huddle” at Yankee will feature a course on “Science and Strategies for Managing Oral Systemic Inflammation.” Seventy percent of all deaths in the United States are caused by chronic disease, with chronic inflammation playing a key role in many of these conditions. This course will detail strategies for maintaining optimum overall health and decreasing inflammation.

An interprofessional symposium “Eating Disorders: Food for Thought” will review the diagnosis and treatment process for eating disorders, including dental restorative treatment — all with a focus on multidisciplinary communication between the various providers who treat patients with a history of bulimia.

“Human Resource Management Essentials” will follow the entire life cycle of an employee — from hiring to managing — to outline the best practices every practice owner and manager needs to know.

Yankee also will feature a special track of courses for new dentists designed to help them learn from experienced practitioners and network with their peers.

The “Yankee C.E. Recharged!” program offers continuing education with an upscale premium format. On Friday, Feb. 1, Henry Schein Dental will immerse attendees in digital and esthetic dentistry, and Colgate will explain how to provide whole-mouth health through coaching.

Along with more than 300 continuing education and hands-on courses and events presented by leading experts in the dental profession, Yankee is bringing together dental peers and industry experts for a day of sharing programs and clinical practices.

The “Yankee Fast Track” program includes “Synergistic Digital and Analog Approaches to Esthetic Implant Therapy,” which will explore why, when and how to incorporate digital dentistry for efficient, productive, predictable, and optimal implant clinical outcomes.

Yankee also will feature a wide range of the latest dental technologies and products from more than 400 exhibitors, along with several education pavilions located on the exhibit hall floor.

For registration details and more information on Yankee Dental Congress 2019, you can visit yankeedental.com or telephone (877) 515 9071.

AO 2019 has surgical, prosthetic tracks

AO 2019, Jan. 31-Feb. 2, Boston

To drive home its theme of “Current Factors in Clinical Excellence,” the 2019 annual meeting of the Academy of Osseointegration (AO) will offer a full day of concurrent surgical and prosthetic tracks on Friday, March 15, to answer the clinical and scientific questions that all clinicians ask themselves, no matter their specialty.

Each track will begin with its own respective plenary session, titled “10 Years After.” “The idea to have a session ‘10 Years After’ means asking why you have changed, if you have changed, your practice, your protocols and your indications,” said Dr. Franck Renouard, 2019 annual program committee chair. “We will ask different speakers both in surgery and prosthetics what they did then and what they do now.”

Moderators for “10 Years After” will include Edward Sevetz Jr., DMD, for the Surgical track and AO Past President Stephen Parel, DDS, for the Prosthetic track. Surgical topics will include vertical and lateral ridge augmentation; full maxillary reconstruction; and augmentation using biologics. For the prosthetic track, Parel, will moderate a series of seven topics, including zirconium and screw retained prosthesis, overdenture, and tilted implants.

Following the morning plenary sessions, in the afternoon each of the tracks will continue return to the science that underpins implant dentistry, featuring sessions on peri-implant bone biology. The surgical track includes “Osseointegration: Restoration of Homeostasis or a Foreign Body Response?” and “Soft Tissue Integration: What is our Current Understanding?”

The prosthetic track includes “The Evolution of Complex Maxillofacial Rehabilitation” and “Current Thought in Restorative Ceramics.”

Titled “Current Factors in Clinical Excellence,” AO’s 34th Annual Meeting, will be held from March 13-16, at the Walter E. Washington Convention Center in Washington, D.C.

More information about the meeting and online registration can be accessed at www.ao2019.osseo.org.

Ultra-bright light is ultralight in weight

By Designs for Vision Staff

Designs for Vision is introducing an advanced photonic design that provides uniform light distribution with maximum intensity. The patent-pending headlights optically focus the light from the LED to provide 45 percent more light with uniform distribution.

The new LED DayLite® Micro HDI™ uses the new high-definition imaging in an ultra-lightweight headlight in combination with the new Micro power pack. According to the company, the Micro is the market’s lightest and smallest power pack. The complete unit includes two power packs, and each power pack can run up to 10 hours.

Designs for Vision also has added high-definition imaging to the LED DayLite WireLess Mini HDI, providing a lightweight cordless solution with light intensity comparable to many corded headlights. You can choose high-definition imaging with either a wired or wireless design to meet your preference, and either HDI headlight will illuminate the entire oral cavity.

Designs for Vision’s WireLess headlights free you from being tethered to a battery pack. The simple modular designs uncouple the headlights from a specific frame or single pair of loupes.

Prior technology married a cordless light to one pair of loupes via a cumbersome integration of the batteries and electronics into the frame. The compact design of the LED DayLite WireLess headlights are independent of any frame/loupes.

Designs for Vision is also featuring the “REALITY five-star-rated” Micro 3.5EF Scopes, which use an innovative optical design that reduces the size of the prismatic telescope by 50 percent and reduces the weight by 40 percent — while providing an expanded-field, full-oral-cavity view at 3.5X magnification.

Building on an established award-winning design, the newest addition to the Micro Series line is the Micro 4.5EF Scopes, which reduce both the size and weight of the telescopes by 44 percent.

Designs for Vision has expanded into a new 67,500-square-foot location at 4000 Veterans Memorial Highway in Bohemia, N.Y. To see photos of the facility you can visit [www.DesignsForVision.com/move.htm](http://www.DesignsForVision.com/move.htm).

You can see the Visible Difference® yourself by visiting Designs for Vision’s booths at the Yankee Dental Congress – (Nos. 1000 and 1827).

You also can arrange a visit in your office by contacting the company at (800) 345-4009 or via info@dvimail.com.

Tell us what you think!

Planmeca Viso™ – See it All

Live virtual FOV positioning
See the patient live from the unit’s control panel for flexible and exact FOV positioning.

Freely adjustable volume
An unlimited field of view range to cover all clinical needs – from a single tooth to a full skull.

Planmeca CALM™
Our new patient movement correction algorithm – for perfect results every time.

Planmeca Ultra Low Dose™
Enables CBCT imaging with an even lower dose than panoramic imaging.

Planmeca ProCeph™ option
Planmeca Viso can also be equipped with the Planmeca ProCeph™ one-shot cephalostat.

Fix top disruptor of CBCT 3-D image quality

By Planmeca Staff

There has been a disruption in the capture of dental images, but remain CALM. Planmeca has the solution.

The No. 1 disruptor of image quality for dentists is patient movement. During a dentist appointment, a doctor may need to take several 3-D X-ray scans to get a single image of diagnostic quality.

Often a child, an individual with special needs or an elderly patient is challenged to remain still.

This may result in the patient being X-rayed multiple times, which adds more time to the appointment and frustration for patient and doctor, not to mention the concern of additional exposure to radiation.

We created Planmeca CALM™ (Correction Algorithm for Latent Movement), a proprietary Planmeca algorithm, to address doctors’ concerns over patient movement during a 3-D scan. With Planmeca CALM, our CBCTs can analyze and compensate for the slight movement that can occur during a scan to provide improved diagnostic quality images.

Minimize retakes, improve diagnosis

This feature (available for every new Planmeca ProMax® 3-D imaging system) will streamline the imaging process, minimizing retakes while improving diagnosis. The key benefit to patients: fewer retakes equals less radiation while achieving better diagnostic images.

“Dentists evaluating CBCT machines for purchase should focus critically on each manufacturer’s solutions for stabilizing the patient in the machine,” said Dale A. Miles, DDS, MS (Inside Dentistry, May 2017).

Compensates for movement

Planmeca CALM addresses this doctor requirement as it can compensate for slight movement to produce diagnostic quality images.

Planmeca CALM is available on new Planmeca ProMax 3D imaging systems or as an upgrade for existing units — check with your authorized Planmeca dealer. Our advanced imaging systems provide detailed and accurate 3-D scans of patients — children and adults.

Complete line of cone beam computed tomography systems

The Planmeca ProMax 3D family consists of a complete line of CBCT (cone beam computed tomography) imaging systems with optional digital 2-D panoramic and cephalometry in the same unit.

Technology is transforming dentistry. The Planmeca CALM imaging algorithm is one of the latest examples of how dental innovations are improving patient safety and comfort — while at the same time improving the clinician’s workflow.

Happy New Year!
Start the new year off right by making an investment in yourself, your practice and ultimately, your patients.
Join us in March for an incredible experience and leave inspired to continue practicing great dentistry.
